Hosted Checkout

Test Phase

Merchant ID	**<Merchant ID>**
Merchant Name	**<Merchant Name>**
Currencies	**<Allowable currency>**
Integration Model:	**Hosted Checkout**

The Hosted Checkout model allows you to collect payment details from your payer through an interaction hosted and displayed by the MasterCard Payment Gateway. With this model of integration, you never see or handle payment details directly because these are collected by the hosted payment interface and submitted directly from the payer's browser to the MasterCard Payment Gateway.

Hosted Checkout can be implemented as:

- **A Lightbox** in a modal dialog over the top of your existing merchant website.
- **A Hosted Payment Page** is a web page hosted and displayed by the MasterCard Payment Gateway.

Integration Guide

Merchant ID : **<Merchant ID>**
Operator id: **Monitor**
Password: "**Aa123456"** must be changed after the first login

Test Cards:

Test Cards	Card Number	EXP		CSC	3D Secure Enrolled
MasterCard	"5123,4567,8901,2346"	"05"	"21"	"123"	Y
	"5123,4500,0000,0008"	"05"	"21"	"123"	Y
	"5111,1111,1111,1118"	"05"	"21"	"123"	N
Visa	"4508,7500,1574,1019"	"05"	"21"	"123"	Y
	"4012,0000,3333,0026"	"05"	"21"	"123"	N

Production Phase

Requesting to go live
After finishing the integration successfully you will use the Test cards from the mentioned URL above to make at least about 15 approved transactions
Then you can be transferred to the live environment after requesting.

Moving to the live environment
After finishing the test phase we will provide you the following:

- The live **<Merchant ID>**.
- Live developer user to create the live webhook Secret or the live Api password.
- Live Monitor user to Viewing and download the test (orders / transaction) and Dashboard.
